

ENHANCEMENTS TO THE PRODUCT OFFERING

We're always improving our products so that you can improve your business.

C1 v2

→ **C1 v2 continues to focus on improving productivity and the provision of accurate real-time data. This is delivered through enhanced visualizations and user experiences, improved digitization capabilities and extensions to the out of the box integrations with M365.**

→ Technical Updates

- The C1 Barcode Scanning application is now available on the Microsoft MAUI platform.

→ Ad-hoc Grids and Business Metrics

- Enhanced features designed to minimize the maintenance and administration effort.

→ Supplier Portal and Customer Portal

- Both re-invented at the C1 v2 release to provide a new modern user-experience.
- The new Supplier Portal provides an easy-to-use self-service, information sharing solution designed to help you and your suppliers get the most from your partnership.
- Take advantages of your opportunities 24/7 in a Global marketplace. A modern cart-based customer portal provides rapid inquiry and order/re-order processes for goods, configured products, services, warranties, upsells and cross-sells.

→ Quality Management

- Quick and simple Customer and Supplier Returns with minimal effort. Status driven returns management and shipment processing that is seamlessly integrated with orders, receipts, shipments, document management, inventory, planning and financials.

→ Accounts Payable Automation

- New Invoice line level registration provides for automated Item and quantity matching. This provides a significant improvement over Manual and Deferred Vouchering processes.

→ GL Account 'clearing' capabilities

- Provides the accounts team with clear visibility and analysis of Control Account entries that are not yet cleared.

→ Workflow based Approvals/Authorizations

- The Powerful decision-making rules and flows in Power Automate can be leveraged to provide the complex, unique business rules and processes most businesses demand.
- Approval/Authorization via Teams and email.

→ New REST based API's

- Macro-API's for creating/maintaining Engineering items, BOM's and Routings, Work Orders, BOM's, Routings, Value Add transactions, Inventory, Supply Orders and Receipts.

→ Factory Planning

- Instantly compare and assess the impact on customer deliveries and machine/workload utilization of various production plan simulations via visual charting, analytics and drill downs. Select the plan that represents minimal delivery delays and overall impact on each and every customer and the best resource utilization.
- Cross Unit Capable to Promise (CTP) functionality conducts a real time test to determine when a demand can be delivered considering multi-level BOM's and cross unit resource and supply chain availability.

C1 v1.0

→ Product re-branded from GLOVIA G2 to CrescentOne

→ New Technical Capabilities

- New Connectivity Framework
- .NET 6 deployment leveraging RESTful webservices. This consistently yields significant performance improvements when processing information via API's, Open Connectors and GMEAP transactions.
- Modern Authentication support for all standard CrescentOne 'Out of the box' integrations with O365 Outlook and SharePoint.

→ Improvements in User Experience and User Productivity

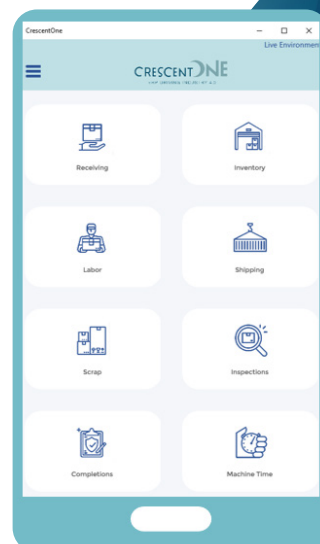

- New 'Wide-screen mode' maximizes the amount of information displayed
- One-click Bookmarking with drag and drop organization
- Immediate visual environment identification for the user
- In-transaction Company switching now available for GMEAP users
- Menu/Function search improvements
- Look and feel - Convention and consistency improvements
- Ability to recall the last 20 records for each specific transactions conducted.

→ New Applications/API's and Open Connectors

- Document Output and Content Management
- Avalara Avatax Open Connectors
- API for maintaining Lot/Serial Trace and Multi-level Equipment register information.

→ Existing module application enhancements

- Service and Repair now supports multi-currency and multi-reporting currencies.
- Transfer Order Planning Enhancements
- Factory Planning Capable to Promise enhancements
- Factory Planning Cross-unit Capable to Promise
- Factory Planning Outside processing and MSPO enhancements

CrescentOne is the leading provider of ERP solutions for the discrete manufacturing industry.

The ERP solution CrescentOne offers complete functionalities for automotive, capital equipment, electronics & electrical engineering, suppliers and industrial products & projects. Complete sector-specific solutions are available within CrescentOne.

Extensive functionalities enable manufacturing companies to manage the entire lifecycles of their products - from design, production and delivery to installation, maintenance and support.

All CrescentOne solutions are suitable for small to medium-sized companies in the discrete manufacturing industry. Thanks to many decades of engineering experience and proven expertise in this industry, CrescentOne delivers perfectly fitting standard functionalities with a relatively short implementation time. Functionalities that are suitable for companies with all common production concepts, such as MTS, MTO, ATO, CTO, ETO and project-driven companies. A mix of these concepts is possible with CrescentOne.
